

## CLAIMS

1. An enclosure for storing one or more guns, the enclosure including an interior compartment defined by a top wall, a bottom wall and one or more side walls, the enclosure comprising:

at least one cabinet having a first surface and a second surface, the cabinet being slidably positioned within the interior compartment; and  
a gun rack coupled to the first surface of the cabinet, wherein the cabinet is selectively moved into and out of the interior compartment.

2. The enclosure as recited in claim 1, wherein the gun rack includes an upper barrel receiving portion and a lower lip.

3. The enclosure as recited in claim 2, wherein the barrel receiving portion further comprises a plurality of recesses for receiving a barrel of a gun.

4. The enclosure as recited in claim 1, further comprising at least one storage compartment coupled to the first surface of the cabinet.

5. The enclosure as recited in claim 1, wherein at least one rail is coupled with the second surface of the cabinet, wherein at least one track is coupled to the side wall of the enclosure, wherein the track and the rail are slidably coupled with one another to allow the cabinet to move into and out of the interior compartment.

6. The enclosure as recited in claim 5, wherein the cabinet is pivotally coupled with the rail thereby allowing cabinet to rotate relative to the enclosure.

7. The enclosure as recited in claim 5, wherein the track is coupled to a protrusion that extends from the side wall of the enclosure.

8. The enclosure as recited in claim 7, wherein the second surface of the cabinet is positioned at a distance from the side wall of the enclosure.

9. The enclosure as recited in claim 8, further comprising a mounting bracket attached to the side wall of the enclosure, the mounting bracket being configured for receiving a plurality of barrel receiving pieces.

10. An enclosure for storing one or more guns, the enclosure including an interior compartment defined by a top wall, a bottom wall and one or more side walls, the enclosure comprising:

at least one cabinet having a first surface and a second surface;

at least one rail pivotally coupled to the second surface of the cabinet;

at least one track coupled to a protrusion formed in the side wall of the enclosure, the protrusion extending outwardly at a distance from the side wall, wherein the track and the rail are slidably coupled to one another, and wherein the

second surface of the cabinet positioned at a distance from the side wall of the enclosure; and

a gun rack coupled to the first surface of the cabinet, the gun rack including an upper barrel receiving portion and a lower lip, wherein the cabinet is selectively moved into and out of the interior compartment.

11. The enclosure as recited in claim 10, further comprising at least one storage compartment coupled to the first surface of the cabinet.

12. The enclosure as recited in claim 10, wherein the barrel receiving portion further comprises a plurality of recesses for receiving a barrel of a gun.

13. The enclosure as recited in claim 10, further comprising a mounting bracket attached to the side wall of the enclosure, the mounting bracket being configured for receiving a plurality of barrel receiving pieces.

14. An enclosure for storing one or more guns, the enclosure including an interior compartment defined by a top wall, a bottom wall and one or more side walls, the enclosure comprising:

at least one cabinet having a first surface and a second surface;

a gun rack coupled to the first surface of the cabinet; and

means for selectively sliding the cabinet into and out of the interior

compartment.

15. The enclosure as recited in claim 14, further comprising means for pivoting the cabinet relative to the enclosure.
